Acceptable Reasons for Vaccine Hesitance w/ 50 Published Medical Journal Sources [all credit to covinfo1999]

[repost without crosspost to avoid NNN quarantine for non-reddit users. absolutely fantastic information worth scouring through to better understand our current crisis. all credit to [/u/covinfo1999](#) and please post here additionally from now on as I'm sure this sub will appreciate your hard work!]

Covinfo Data Dump:-

The current Covid19 vaccines have several problems. I would say that there are 9 main areas of interest:

- the spike protein appears to be cytotoxic.
- the emergence of immune escape variants.
- the potential for antibody dependent enhancement.
- the potential for autoimmune disorders.
- the narrow design focus of the vaccines.
- the fact that alternative treatments are available to both prevent and treat covid.
- they are trying to jab everyone, even people who have recovered from covid and do not need the jab.
- there are a growing number of severe reactions to the vaccines but this fact gets very little coverage in the press and sometimes it even gets outright censorship.
- the potential for long term unknown side effects and the potential impact of this on national security.

I will present a brief overview of each issue and then provide scientific data below for support (except for 9. which is more a discussion based on a logical assessment of future risk).

1. The spike protein of the virus, that is also being utilized in the vaccines, is damaging to our cells through 3 mechanisms. The first is that when the spike protein binds to the ACE2 receptor it causes the ACE2 to send signals to the mitochondria within the cell which destroys the mitochondria, eventually killing the cell. The second is that when the spike protein binds to our ACE2 receptors it causes the ACE2 to send signals to other cells which increases the amount of pro-inflammatory agents in the blood. This inflammation damages the tissues. The third way is that when the spike protein binds to the ACE2 of the platelets in our blood, it causes them to clot. Now, the vaccine manufacturers did take steps to make the spike protein more safe. The spike protein has two parts an S1 subunit and an S2 subunit. The S1 is the part that connects to the ACE2, and the S2 is the part that opens up like a knife stabbing the membrane and facilitates fusion between the membrane of the cell and the envelope of the virus. With the vaccines, they modified the S2 subunit so that it could not open up and jab into the cell membranes if it connects with any ACE2 receptors. They thought this would make the spike protein safe, but this assumption is false and if they had taken the time to do more research before rushing to production they would have found that out. It may seem like the jabby bit is what damages the cells, but actually the major damage is caused by the S1 connecting to the ACE2 receptor. Just the S1, by itself without the S2, causes the ACE2 receptor to start the cell signaling processes that cause the mitochondrial damage, the pro-inflammatory response, and the blood clots.

Studies on the spike protein:-

How the virus uses the spike protein to enter human cells: <https://www.nature.com/articles/d41586-021-02039-y>

Article on how the Covid19 spike protein crosses the blood-brain barrier: <https://www.sciencedirect.com/science/article/pii/S096999612030406X?via%3Dihub>

Japanese article on how the Pfizer vax is associated with brain hemorrhaging (lending credence to the hypothesis that the spike proteins are crossing the blood brain barrier in some people): <https://joppp.biomedcentral.com/articles/10.1186/s40545-021-00326-7>

F

/NEJMoa2104840

Article on how the Covid19 spike protein binds to the ACE2 receptor of our platelets to cause bloodclots: <https://jhoonline.biomedcentral.com/articles/10.1186/s13045-020-00954-7>

Article explaining that blood clots from the spike protein interacting with our platelets are associated with both COVID-19 infection and vaccination: <https://journals.plos.org/plosmedicine/article?id=10.1371/journal.pmed.1003648>

Article explains that just the S1 subunit of the spike protein can cause platelets to clot: <https://www.medrxiv.org/content/10.1101/2021.03.05.21252960v1>

Article with evidence that spike proteins do end up circulating in the blood, when they're not supposed to, they're supposed to be anchored on the cell membranes: <https://academic.oup.com/cid/advance-article/doi/10.1093/cid/ciab465/6279075>

More evidence that spike proteins do not stay on the cell membranes but end up circulating in the blood. This study aims to explain the blood clots caused by the J&J and AstraZeneca adenovector vaccines, they claim that the DNA isn't properly spliced and the spike proteins end up in the blood causing thrombosis when the spikes attach to the ACE2 receptors of the endothelial cells: <https://www.researchsquare.com/article/rs-558954/v1>

Article on how the spike protein can cause neurodegeneration: <https://www.sciencedirect.com/science/article/pii/S0006291X2100499X?via%3Dihub>

Journal article with evidence that the spike protein by itself can damage cells by binding to ACE2, causing the cells mitochondria to lose their shape and break apart: <https://www.ahajournals.org/doi/10.1161/CIRCRESAHA.121.318902>

Article on how the spike protein in vaccines can cause cell damage via cell signaling: <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7827936/>

Article that when the spike protein binds to the ACE2 receptor it causes the release of soluble IL-6R which acts as a extracellular signal which causes inflammation (see the first paper for evidence that the spike causes the release of IL-6R and see the second paper for an explanation of how soluble IL-6R causes pro-inflammatory extracellular signaling: <https://pubmed.ncbi.nlm.nih.gov/33284859/> And <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3491447/>

Another article that Spike protein from covid or the vaccine causes inflammation through cell signaling, this time there is evidence that the spike protein causes senescence (premature aging) signals in the cell which attracts leukocytes that cause inflammation of the cell: <https://journals.asm.org/doi/10.1128/JVI.00794-21>

Spike protein by itself causes cell damage by eliciting a pro-inflammatory response: <https://www.nature.com/articles/s41375-021-01332-z>

Biodistribution data:-

Pfizer animal testing document that was obtained by Dr. Byram Bridle through a FOI request to the Japanese government which shows the biodistribution of the lipid-nano particles throughout the bodies and organs of the test subjects. This is evidence that the lipid nanoparticles do not stay in the injection site, but instead travel all throughout the body (go to pg 16/23 for the charts showing biodistribution over the course of 48hrs): <https://files.catbox.moe/0vwcmj.pdf>

Addendum to the above link. This blog post provides easy to understand information (with pictures) on the make-up of the lipid nanoparticles used in the Covid19 vaccines. It shows that the pharmaceutical companies could have designed them to have targeting ligands on the outside, so that the nanoparticles would only transfect the muscle cells. But instead the vax was designed with PEG polymers on the outside, so that the immune system will not be able to pick them up and put them in the trash. The PEG is what Byram Bridle says is the reason the vaccine travels throughout the body and since it does not have targeting ligands, it can transfect any type of cell: <https://www.cas.org/resource/blog/understanding-nanotechnology-covid-19-vaccines>

2. Vaccine enhanced immune escape occurs when a poorly designed or weak vaccine helps create new variants. This happens in the exact same way as antibiotic resistance and regular old evolution. In the case of evolution, if you want to make an organism stronger, you put it under evolutionarily unfavorable conditions. This way you kill all

r/conspiracy

to survive the heat, allow them to grow, and repeat the process over and over again while turning up the heat just a little each time. Do this until you have a population of bacteria that are all extremely heat resistant. The same process occurs with antibiotic resistance. When you only take half your meds, you kill 99% of the bacteria and you leave only the 1% that were slightly more resistant to the drugs and now they flourish. Before they were a small part of the population but you changed the conditions of their environment so that they have the advantage. You've killed all the normal bacteria that the mutant variants had to compete with so that now the antibiotic resistant bacteria are the alpha strain that have unlimited resources and so surge in population to take over your body. Well, the same thing happens with viruses and vaccines.

If you produce a vaccine that elicits a weak immune response, you are creating an unfavorable environment for the virus. This will kill the weak 99%, and leave those 1% of mutant virus particles that are not as hindered by the antibodies produced by the vaccine. Whereas before these mutants were only a tiny part of the population and would have been unlikely to transmit on to the next person. Now these mutant virus particles surge in number because they no longer have to compete with the other virus particles and your bodies defenses do not work. They are now highly likely to transmit on to the next person, whereas before they would not have been able to leave the host in which the mutation occurred. In terms of creating variants, the current covid vaccines are very bad for three reasons. First, some vaccine manufacturers require two shots and now also boosters because the first shot produces a very weak immune response. Second, the vaccines are very leaky. Even after you have gotten a full immune response from both shots, you can still get and transmit the virus onto others. Well, which virus particles are likely to get passed on by a fully vaccinated person? Clearly they will be those virus particles that have the ability to multiply quickly while avoiding the antibodies produced by the vaccines. This will create very virulent and antibody resistant variants. Watch for these variants in the news as time goes on, we're already seeing things like Delta, Lambda, Epsilon, etc.

As we implement boosters, they will start to come at faster and faster rates, and over time data scientists will start to see timed correlations between the implementation of mass boosters and the emergence of new strains. Third, the vaccines do seem to help reduce the severity of the disease when people are infected (although this may change as new variants emerge). Why would this be a concern? Well, because of the leakiness of the vaccines we just spoke about. If you have very low symptoms but you can still get and transmit the virus, then you won't even realize that you're sick and you'll be spreading the virus to even more people as an asymptomatic carrier. So, these vaccines will only increase transmission by creating more and more asymptomatic carriers (although this may not be a bad thing, if everyone in the world gets the virus and everyone is asymptomatic, then there's really no need to care about covid anymore. But this is an unrealistic idealization that is unlikely to occur, some people will still get sick and die or suffer long haul covid). One additional point to address here is the claim that the unvaccinated are causing the emergence of new vaccine resistant variants. Let me be clear, the unvaccinated absolutely have the ability to facilitate the creation of new variants. However, it would require a statistically enormous number of people to get the virus before they could produce a new variant by chance. This is because a mutant virus particle will only make up a small portion of the virus population inside a person's body.

Therefore, it is highly unlikely that this particular particle will be able to spread to a new person. Whereas, in the vaccinated, their weak immune response specifically selects for the mutant variants. It is highly likely that if a vaccinated person passes on the virus to another person, the particles they pass on will be those that have the ability to escape from the immune response elicited by the vaccines. An analogy would be if you did an experiment with 500 room temperature petri dishes filled with bacteria and 500 heated petri dishes with bacteria, then found a heat resistant variant but didn't know which dish it came from. It would be absurd to think that the heat resistant strain of bacteria came from the room temperature petri dishes. It would be possible, sure, but completely improbable that the heat resistant strain had suddenly appeared in a room temp petri dish. There would be no reason for it to become a dominant strain in that environment. Logically, statistically, and evolutionarily, it must have come from the heated petri dishes. This is a very basic and obvious conclusion, but the media and government bureaucrats in lab coats are trying to tell you that the absurd thing is true. They're trying to say that the unvaccinated (the room temperature petri dishes) are where the vaccine resistant strains are coming from.

Vaccine Enhanced Immune Escape:-

Evidence of cov2 immune escape: <https://science.sciencemag.org/content/early/2021/06/30/science.abi7994>

Article from 2015 that explains how imperfect vaccination (like the Pfizer and moderna that require at least two shots to be effective) can create immune escape variants: <https://journals.plos.org/plosbiology/article?id=10.1371/journal.pbio.1002198>

Article from 2021 explains that unless vaccination is done quickly, there will be a high probability of escape mutants:

r/conspiracy

...there is a potential for ADE, antibody dependent enhancement. This is when the virus mutates so that the antibodies no longer neutralize the virus but the antibodies still try to attach to it. This can actually help the virus get into your immune cells because when the virus is covered with antibodies it will draw macrophages to the virus that will try to eat it. However, when your macrophages come to eat the virus particle that they think has been neutralized, the virus gets inside them and starts replicating because the antibodies actually didn't neutralize the virus. Your own antibodies act like a kind of Trojan Horse. Another way that ADE can happen is your own antibodies connect to the receptors of your cells and actually help the virus get in directly. This was a huge problem with the Dengue vaccine and we need to do a lot of testing to make sure this isn't a possibility. Clearly with these rushed vaccines we haven't eliminated this possibility and with the virus mutating, ADE may pop up with a later variant. We must stay vigilant and keep an eye out for this signal. It will manifest as people with high antibody levels being more likely to get sick and die.

Antibody Dependent Enhancement:-

Journal article from 2005 shows evidence that sars-cov1 vaccine, that also focused on the spike protein, caused ADE when subjects were challenged with different strain: <https://www.nature.com/articles/news050110-3#ref-CR1>

Article explaining how ADE works in Sar-cov1: <https://www.nature.com/articles/s41586-020-2538-8>

Article explaining the potential for ADE in Covid19: <https://www.nature.com/articles/s41586-020-2538-8>

Another article that speculates on the potential for ADE in Covid19: <https://pubmed.ncbi.nlm.nih.gov/32920233/>

Article from 2021 explains that there is evidence that covid19 is able to kill macrophages by using antibody dependent mechanisms: <https://www.biorxiv.org/content/10.1101/2021.02.22.432407v1>

4. There is a potential for an autoimmune response from the vaccines. The vaccines that were developed for Sars-Cov-1 used the spike protein, just like the vaccines for Sars-Cov-2. Unfortunately, those vaccines caused the animals to develop serious autoimmune disorders and they ended up causing severe organ damage. There is a question about whether these new vaccines, which also focus on the spike protein, will also cause autoimmune disorders. The problem is that autoimmune disorders take time to develop and to show up. It may also take a long time before doctors and scientists can link the sudden rise in autoimmune disorders with these vaccines. Usually, in a vaccine trial you closely monitor your trial group for years and years. This allows you to identify the signals. With the current program of injecting millions of people, there will be no clear way to link causation to the vaccines and an increase in autoimmune disorders may just fly under the radar. We may not know for a very long time or never. Another concern is that because of the way the mRNA vaccines work, they cause your own cells to present as foreign entities. Your immune system comes over and starts killing your own cells. This has never been done before in human history. We have no idea if there will be long term consequences for this and whether this will lead to autoimmune disorders.

Research results of past vaccines for sars-cov1 that used the spike protein:-

Journal article from 2004 on autoimmune disorders from Sars-cov1 vaccine that also focused on the spike protein: <https://www.cidrap.umn.edu/news-perspective/2004/12/sars-vaccine-linked-liver-damage-ferret-study>

Journal article from 2005 on autoimmune disorders from Sars-cov1 vaccine that also focused on the spike protein: <https://pubmed.ncbi.nlm.nih.gov/15755610/>

Journal article from 2012 on autoimmune disorders from Sars-cov1 vaccine that also focused on the spike protein: <https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0035421>

Journal article from 2020 on autoimmune disorders from Sars-cov vaccine (can't figure out if they're talking about cov1 or 2): <https://jvi.asm.org/content/78/22/12672.abstract>

Journal article from 2020 explains why immune disorders happen with covid vax, because human and Covid19 proteins are similar: <https://www.sciencedirect.com/science/article/pii/S2589909020300186>

5. The mRNA vaccines are narrowly focused on just the spike protein when they could have been designed to target more proteins. The Covid19 coronavirus has 4 main proteins. There are 3 on its outside and 1 on the inside. The S-protein, the M-protein, and the E-protein, are on the outside, while the N-protein is on the inside. When you get a natural infection your body will likely produce antibodies for all or most of these proteins (depending on the function of your own unique immune system). We knew from studying Sars-Cov-1 that antibodies to the S-protein and the M-protein are both neutralizing. In fact, they used exactly that knowledge when they designed the current

r/conspiracy

have designed the vaccines so that they present both the S-protein and the M-protein. This would have made the vaccines much more effective and less leaky since any mutated virus particles would have to have mutated both the S-protein and the M-protein to avoid the antibodies. Whereas, the current vaccines are narrowly focused on just the S-protein, meaning that the virus only has to mutate the one protein. It is exponentially harder for an organism to mutate two beneficial traits vs just mutating one beneficial trait. So, these vaccines are worse than they could have been.

Vaccine efficacy:-

Article explains how vaccine manufacturers have used relative risk reduction to determine that vaccine efficacy is ~90+%, however they should have used absolute risk reduction which would tell us that the vaccines will only reduce total covid cases by ~1%: [https://www.thelancet.com/journals/lanmic/article/PIIS2666-5247\(21\)00069-0/fulltext](https://www.thelancet.com/journals/lanmic/article/PIIS2666-5247(21)00069-0/fulltext)

Addendum to the above information. This video from 2013 explains the difference between relative and absolute risk reduction in a very simple way: https://www.youtube.com/watch?v=7K30MGvOs5s&ab_channel=TerryShaneyfelt

Article from 2005 explains that antibodies to the S-protein and the M-protein are effective in neutralizing the sars-cov1 virus. However, the sars-cov2 vaccines only target the S-protein. This is evidence that the vaccine manufacturers could have chosen to make a superior mrna vax that produced two types of antibodies, but chose to focus narrowly on just the S-protein: <https://pubmed.ncbi.nlm.nih.gov/16544518/>

Antibodies from vaccines start to drop within 6 months, get ready for endless boosters: <https://www.nature.com/articles/s41586-021-03777-9>

6. There are alternative treatments that are effective against Covid19 but they are being suppressed. Why? Because the vaccines are not approved by the FDA but instead they are emergency use authorized only. The emergency use authorization can only be granted if "there are no adequate, approved, and available alternatives". Well, a growing body of scientific research is showing that both Ivermectin and Fluvoxamine (among other drugs) are adequate alternatives for early treatment of Covid19, and both of these drugs have been FDA approved for years. Unfortunately, that means they are now off patent and no one can make any money off of them. So, for the vaccines to continue to receive their EUA, the existence of these treatments must be suppressed. We have seen a huge amount of censorship of doctors who have been speaking out about these drugs.

Ivermectin:-

Emergency use authorization for the vaccines cannot be granted if there are effective alternative approved treatments for Covid19. So, if the pharmaceutical industry is going to make any money off covid, they must suppress the existence of any existing off patent drugs that may be effective in treating or preventing covid: <https://www.fda.gov/emergency-preparedness-and-response/mcm-legal-regulatory-and-policy-framework/emergency-use-authorization>

Meta-analysis on the efficacy of Ivermectin in treating Covid19: https://journals.lww.com/americantherapeutics/Abstract/9000/Ivermectin_for_Prevention_and_Treatment_of.98040.aspx

A double-blind, randomized placebo-controlled trial shows that Ivermectin is able to cure covid within 6 days for most people: <https://www.medrxiv.org/content/10.1101/2021.05.31.21258081v1>

More evidence that Ivermectin treatment leads to much faster recovery from Covid19: <https://onlinelibrary.wiley.com/doi/10.1002/jmv.26880>

An NIH study reveals that a five-day course of ivermectin for the treatment of COVID-19 may reduce the duration of illness: <https://pubmed.ncbi.nlm.nih.gov/33278625/>

Ivermectin stops replication of covid: <https://www.sciencedirect.com/science/article/pii/S0166354220302011>

Ivermectin has anti-viral properties: <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3888155/>

Ivermectin has anti-viral properties against covid: <https://www.nature.com/articles/s41429-020-0336->

Ivermectin binds to Covid19 proteins to block the virus: <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7996102/>

Evidence that Ivermectin can be effective as a prophylaxis, Argentinian frontline healthcare workers were given Ivermectin as a preventative and zero got sick with covid, whereas 58.2% of the control group who did not take

r/conspiracy

F

Ivermectin safe to give 12mg per day for 5 days: <https://www.ijidonline.com/article/S1201-9712%2820%2932506-6/fulltext>

Ivermectin safely administered 60mg per day for 6 months: <https://www.tandfonline.com/doi/full/10.1080/110428194.2020.1786559>

Fluvoxamine:-

Fluvoxamine helps in covid treatment: <https://pubmed.ncbi.nlm.nih.gov/33180097/>

Covid leads to long term inflammation, useful for long haul Covid19 treatment: <https://pubmed.ncbi.nlm.nih.gov/33391730/>

Fluvoxamine has anti-inflammatory properties that can help treat covid: <https://www.frontiersin.org/articles/10.3389/fphar.2021.652688/full>

Fluvoxamine targets sigma-1 to stop covid replication: <https://pubmed.ncbi.nlm.nih.gov/33403480/>

7. We've known for decades that once you are infected with a virus or disease, your body creates a robust immune response, including memory T cells and B cells. These cells stick around so that you can quickly respond to a new infection. However, this fact is being completely ignored by vaccine pushers, they want a needle in every arm, even in the arms of those who do not need it, like the covid recovered. We might say, well covid is new and different, and perhaps immunity wanes after a time. This assumption was prudent in the beginning of the pandemic but now we have lots of evidence that the covid recovered have a near zero chance of getting sick again. Your body takes a few weeks and months to build up its antibodies after an infection. Most of the time the second infection takes place during this time frame. There is no reason to force every covid recovered patient to take an experimental drug, especially after that initial 3 month period after they have build up a sufficient immune response. If you still think that the miniscule chance that their immune system has failed makes them a danger, then why are these people not asked for proof of antibodies. It's because they don't actually care if you have antibodies. The vaccinated, without knowing whether they have antibodies or not, can walk around free, but a covid recovered patient, with proof of antibodies is still considered a danger. It's ass backwards and it is evidence that vax pushers don't actually care about immunity. It is just about getting a needle into every arm. The reason why they are doing this, I do not know I leave it up to you, but it doesn't make sense and I make a point of not going along with things that don't make sense.

Studies on covid recovered:-

No benefit from vaccination of previously infected individuals: <https://www.medrxiv.org/content/10.1101/2021.06.01.21258176v2>

Covid19 infection produces long lasting immunity: <https://www.nature.com/articles/s41586-021-03647-4>

Second article that covid19 infection produces life long immunity: <https://www.nature.com/articles/d41586-021-01442-9>

More evidence that covid19 infection produces long term immunity: <https://www.medrxiv.org/content/10.1101/2021.04.19.21255739v1>

Study of 600,000 covid recovered patients finds less than 1% reinfection rate over 10 months and an almost 0% risk in the first 7 months: <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC8209951/pdf/RMV-9999-e2260.pdf>

8. There is a growing amount of data that people are having severe reactions to the vaccines. It gets little to no coverage in the press, in some cases people who talk about their reactions on social media are being censored and called anti-vaxxers (I mean, how asinine to call someone who took the jab an anti-vaxxer) or fakers (I am sure some are faking for money/attention, but I highly doubt it's many of them given the social consequences for lying). Some senators have done press conferences with these people so they can tell their stories. There are publicly accessible government databases which contain reports of people who have had adverse reactions to the vaccines. These systems were put in place in the 90's to act as a sort of early warning system and to give transparency to the public after previous botched vaccine rollouts like the 1976 swine flu vaccine debacle. You can go and read these reports for yourself. There are websites that download the reports and present them to the public in a very readable manner (the government website from the 90's is not very good). There are concerns that these reports are being made in error or by bad actors. However, research has been done into these systems and it was found that more

r/conspiracy

vaccination program. As of writing this, for the covid vaccines the deaths are into the thousands and the serious adverse reactions are into the hundreds of thousands. Yet they just keep rolling with the shots and now are even forcibly mandating the shot.

VAERS:-

Analysis on the VAERS death data shows that in 86% of reports the vaccine cannot be ruled out as a causal factor in the death of the patient: https://www.researchgate.net/publication/352837543_Analysis_of_COVID-19_vaccine_death_reports_from_the_Vaccine_Adverse_Events_Reporting_System_VAERS_Database_Interim_Results_and_Analysis

Addendum to the above link. OpenVAERS is a site that allows you to easily read VAERS reports and breaks down the numbers. The reports seem to be a lot of people who have comorbidities or are old, but there are also some really eye opening cases where young people experience horrible side effects. Read for yourself and make up your own mind about what the vax is doing to your fellow Americans: <https://www.openvaers.com/openvaers>

9. Criminals are innocent until proven guilty, but medical drugs are not like criminals, medical drugs are guilty until proven innocent. Pharmaceutical companies must prove the innocence of their medications through long term testing. Doctors, bureaucrats, and the public seem to have forgotten this fact when they mandate a new technology to be injected into us without long term testing to prove the innocence of the drug. The vaccine may have completely unknown and serious side effects that manifest in a majority of the people only in the long term. So, the vax may appear to be safe in the short term, but in the long run it causes severe harm or even death. It is extremely risky to inoculate the entire population if we don't know what the long term effects may be. It is especially risky to vax our critical workers with an experimental drug about which we know nothing in the long term. If it turns out that within 2 years of taking it, the vaccine causes the debilitation of a large portion of the people who took it and we had forced all our healthcare professionals to take it, then our countries will lose a large portion of their healthcare professionals. This would devastate our society's ability to treat the sick and cause massive death and suffering. Same goes for the military. If we vax all our fighters, and the vax turns out to greatly physically or mentally weaken most of the people who took it, there goes our ability to defend ourselves. We won't be able to fight off any aggressors and will lose years of military experience as we will have to re-train a whole new set of recruits without the previous military leaders. If most of the laborers are vaxxed and the vax causes bodily weakness, then they won't be able to go to work and our production falls to zero. Without domestic production, we would have to rely on foreign imports but the economy would also grind to a halt so the nation would have no money to pay for these imports. This would probably be a death stroke for whatever nation was victim to it. So, force vaccinating critical workers, or even a large portion of the menial labor force, is a massive national security risk. We also have no way of calculating how large the percentage of risk is since we know nothing at all about the long term effects of inoculation with this type of technology. This could utterly destroy any highly vaxxed nations. This outcome would be so bad (total collapse of a society's infrastructure) that only a massive amount of safety data could justify inoculating the entire population with any treatment. But we just don't have that safety data for these experimental drugs right now, and will probably not have it for decades to come. By then, it will be too late to do anything about it. You can fry an egg, but you can't unfry it. Just the same, you won't be able to unvax the population, there's no way to get the vax out of the body once it's in. The solution is to only vax the old and vulnerable at risk populations and not vax everyone. This issue worries me deeply since there must be risk responsive people at high levels of government who must understand and be sensitive to this type of national security risk. Yet, these people are either being completely ignored or they are allowing the government to proceed with the risky mass vaccination programs anyway.

Separately, these 9 issues would be a concern. But put together, they are incredibly alarming. To me, something feels very wrong here. You too may have already felt it in your gut or in the back of your mind or when reading this. That feeling that something is wrong is instinct, it is the product of millions of years of evolution. A gift from our ancestors who also saw something that was wrong in their environment and had this weird bad feeling. They acted on it and it saved them. So they were able to pass on that instinct to their off-spring from generation to generation. Now, after millions of years, it finds its way to you. If you feel what I feel, that something is very wrong here, I implore you:

Do not ignore it.

long lasting impact, & thus the reason they think they need to give booster shots is that they want to dramatically reduce shield strength, while giving people a single spear weapon, while setting up a kind of codependency requiring annual booster shots amid diminishing returns due to the damage and impact on the immune system.

For the FDA to then approve with an aim to mass-vaccinating children, and heaping on mandates which violate the Nuremberg Code, for whom the threat of death is near zero, and who have an immune system at least 3X stronger than adults - is a telltale sign that we're not dealing with a benevolent intent.

Leave the kids ALONE! Give them supplements instead as a preventative measure.

<https://c19early.com/>

What an outrage - if they continue and persist, while continuing to de-emphasize early antiviral intervention and treatment.

We also now know that the vaccinated are more likely to be asymptomatic superspreaders, so it's contributing to, not mitigating spread.

How can the FDA approve this? WTF is going on?

215 Vote Reply Give Award Share Report Save

banefullplatypus · 8d

WTF is going on is that our entire government is corrupted by regulatory capture and the promise of big bucks for some and / or loss of access to power for the rest. Our entire western society has succumbed to a type of greedy fear, fear that they will lose their cushy job / position, the BMWs, the million dollar + houses, vacations, etc. That's how it's so easy to pull this off, nobody wants to risk their cushy livelihoods in the medical complex,

So I just watched Survivors Guide to Prison, it's a documentary about well, the US Prisons industry. It was made in 2018 well before the "trust the science" fad. Basically, it's motto was question everything the govt says. They aren't here to help they are here to make money. Pharma is no different. However, they highlighted the study from the 60s were normal people would follow orders from an authority even if it meant actively torturing or killing a fellow person. We have entered that study in real life.

If everyone becomes disabled Idk how they'll have much of a cushy lifestyle either tho...If the disabled people end up with nothing left to lose they could go completely insane. I mean, how many disability payments are they ready to payout? And if this happens globally? This would be a very weird and twisted way to achieve world peace... every country having to use it's military fund for mass disability funds

With money (or future debt) tech will find a way.

I assume it'll be similar to Japan and robotic development to take care of elders.

Darker thoughts are A Brave New World human cloning centers etc to repopulate humans and keep AI in check. It's late and I'm just pulling at the string of a thought, sorry.

6 Reply Give Award Share Report Save

reallytrulymadly · 3d

If too many people became disabled at once though, this would be catastrophic. Quite a few of the vaxxed are in the tech industry. That's why it's important to let people choose for themselves. If EVERYONE takes it, and it's defective later on, we're all screwed. If not, then eventually the holdouts will probably give it a try, of their own free will.

That being said, I still think masks on buses and in grocery stores are a good idea. Some ppl are hella rude with coughing out lol.

worlds a desolate ball with horrific weather. They no longer need money, they're beyond it. They literally own everything.

It would be far easier to remove the problem completely (most of us) and have a nice existence with the help of robots and AI, with enough of them to keep things social and enough of us to do the maintenance and upkeep and keep the gene pool fresh.

The rest of us are just a scourge on their beautiful, perfect world.

Just Say No If you are threatened with losing your job, tell them to shove it and sue. As long as people are putting up with this despotism, we will continue getting screwed. Within 2-5 years a good number of people who took the poison vax will either be dead or have a serious autoimmune disease. This Jab is NOT a vaccine. It is gene therapy, so take it at your own risk. There's no "buyer's remorse" on this one, it'll be too late.

10: Pharmaceutical companies immunity to liability.

I can understand why we might want to protect these companies who could be producing a life saving vaccine, however if history of pharmaceuticals has shown us anything, we need more accountability, not less. The sacklers & oxycontin, the dengue vaccine, viox and many more should give all of us some pause.

11: naivety to the problems of scale. Some ideas seen fine on their own, burning oil to produce power in cars seemed fine until we scaled it up, now it's clear it's devastating our habitat. We need those long term studies to be able to make good decisions, otherwise we could be walking into a global catastrophe caused by us doing something wrong instead of nothing at all. An experimental vaccine using an experimental vector that has not been exposed to the massive biological variation in our population, we really have no precedent for what could happen here.

45 Reply Give Award Share Report Save

velvetvortex · 7d

Excellent further points. Realistically I think that on the balance of probabilities the vaccines won't cause too many serious problems, but I think there is enough of a chance that they might.

3 Reply Give Award Share Report Save

Cybersoaker · 7d

I do hope you're right given the amount of my friends who have received these vaccines.

I'm deeply concerned that the FDA appears to be skipping their normal process and is planning on giving phizer it's full approval on monday. The FDA normally requires several years of data to make that assessment, which unless they have access to a time machine, cannot exist by definition.

ADE is probably the most concerning thing to me and the fact we need to administer boosters constantly will be basically re-exposing the entire population to the risk of acute issues.

1bir · 8d · edited 3d

1. The spike protein of the virus, that is also being utilized in the vaccines, is damaging to our cells through 3 mechanisms. The first is that when the spike protein binds to the ACE2 receptor it causes the ACE2 to send signals to the mitochondria within the cell which destroys the mitochondria, eventually killing the cell. The second is that when the spike protein binds to our ACE2 receptors it causes the ACE2 to send

r/conspiracy

platelets in our blood, it causes them to clot.

If this description is correct, and these are the main cause of the short term vaccine side effects, coadministration of angiotensin receptor blockers (ARBs, like losartan, normally used as a blood pressure medications) during the period when spike proteins are being expressed (or are believed to be persisting on cell membranes) should prevent these side effects. (ie because the ARB would preferentially bind with those receptors and prevent the spike protein binding.)

Sadly the lockdown on discussion of vaccine side effects also means no-one can talk about ways to prevent them.

This made me feel a lot better about my decision. I had Covid back in March and when I went to get tested I was advised by the nurse their not to get vaccinated at least for 90 days cause it could be dangerous. (I did not want to get vaccinated at all) since then I have been continuously pushed into getting it because I was a danger or whatever. But I believed now and then that I have probably more antibodies then most people (who haven't had Covid) but that doesn't matter to anyone. Thanks for #7

16 Reply Give Award Share Report Save

reallytrulymadly · 7d

It's a new form of discrimination. Now that it's taboo to exclude people for gender, race, etc, they had to come up with this as a way to divide people. If you did this to a gay guy with AIDS you'd be called a bigot, but a lot of people don't realize that this is a lot closer to that they think, in some ways it's even worse.

↑ 71 ↓ Reply Give Award Share Report Save

thepaperthief · 8d

Be funny if it were the other way around.

↑ 20 ↓ Reply Give Award Share Report Save

jamjar188 · 8d

I mean, if you really wanted to create a bio-weapon the most ingenious way would be to use vaccination as a Trojan horse.

Step 1 - Create a pandemic narrative around a flu-like virus. Make everyone think that they're equally at risk, that it spreads asymptotically, and that without destructive suppression measures all of the world's healthcare systems would collapse.

Step 2 - Censor and dismiss existing treatments, or any information which questions the need for

r/conspiracy

Step 3 - Roll out mass vaccination programmes, using a mix of material incentives, coercion, advertising, and behavioural psychology.

Step 4 - Create a narrative about more transmissible, more "dangerous" variants, claiming that they are keeping the pandemic going despite vaccination. Continue to test at scale with highly-sensitive methods to prove this.

Step 5 - Roll out a booster programme to mitigate the spread of variants. This can be repeated for years and years, and each time modifications are made to the vaccines with the justification that it's like a "software update" for the mRNA, so that it can respond to viral mutations.

Each of these modifications could, in fact, trigger responses that weaken people's immune systems, increase their susceptibility to pathogens, or make them more likely to develop autoimmune disorders down the line.

I'm not actually saying the vaccine is a bio-weapon or that there's a conspiracy behind it; I'm just saying it's a more logical theory, at this point, than the mainstream narrative of covid being the biggest ever health threat to humanity and the vaccines being miracle cures that every single person on Earth must submit to.

↑ 32 ↓ Reply Give Award Share Report Save

uhyeahokwhateva OP · 8d

I'll add a little bit further to your 'crazy' idea.

Extremely lethal viruses is what everyone seems to envision when it comes to a bioweapon. "OMG it kills 50% of the people it infects!" But the problem with that is a virus that kills it's host too quickly doesn't have time to spread. So long incubation times and asymptomatic transmission would be gold stars on any eugenicist's spreadsheet. And then you couple that with a weak vaccine protocol that isn't sterilizing.. and you allow for more dangerous variants to naturally breed themselves into the genome. Little by little strains of the virus are carried by your 'shielded' carriers being allowed to propagate a bit more deadly one replication at a time.

You already have your excuse. The people that don't submit are sent into hiding and/or killed off. And little by little the once not very lethal but highly virulent virus has achieved an extremely worrisome mortality rate, maintains it's Ro of 6-8, and ravages anybody not up to date on the current firmware.

↑ 11 ↓ Reply Give Award Share Report Save

jamjar188 · 7d · edited 7d

Oh wow, I just read a piece that supports what you're saying -- that vaccines could be creating worse mutations.

Also re: aysmptomatic spread, the irony is that no matter how much Govts tried to claim it was a driver of spread, it really wasn't -- but now that we have a large poriton of 'shielded' carriers walking around, it might actually become reality!

I'd rather have a virus make them in my lungs than a vaccine force my own cells to make them throughout my body in tissues like ovaries and heart

17 Reply Give Award Share Report Save

MajesticBread9147 · 8d

Viruses replicate by hijacking cells, the vaccine just has enough proteins for your immune system to react to the "threat" so it recognizes the real thing as a threat. There is no replication of the proteins with the vaccine.

5 Reply Give Award Share Report Save

transcis · 8d

But the vaccine dose is huge. Moderna dose have 10 billion mRNA molecules. A virus will have to work hard to get to that number and with most people it will fail

11 Reply Give Award Share Report Save

9 more replies

brave_00 · 8d

Each vaccine and booster supplies trillions more spike proteins, far more than an infection would ever produce.

20 Reply Give Award Share Report Save

ModsPowerTrip · 8d · edited 8d

No, you have that completely backwards.

Covid infection produces orders of magnitude more viral proteins than covid vaccines do.

One can contextualize these estimates using an absolute mass perspective. Each virion has a mass of ≈ 1 fg (5). Therefore, even when the body carries 10^9 to 10^{11} viral particles, these have a mass of only about **1 μ g to 100 μ g**, that is, 1 to 100 times less than the mass of a poppy seed.

<https://www.pnas.org/content/118/25/e2024815118>

The lowest calculated mass of viral concentrations resulting from sars cov 2 infection is roughly **1 microgram**, the upper end is **100 micrograms**.

The average concentration of spike protein in the blood as a result of a covid vaccine is roughly **68 picograms** per mL.

S1 antigen was detected as early as day 1 postvaccination, and peak levels were detected on average 5 days after the first injection (Figure 1A). The mean S1 peak level was **68 pg/mL \pm 21 pg/mL**. S1 in all participants declined and became undetectable by day 14.

edit: <https://academic.oup.com/cid/advance-article/doi/10.1093/cid/ciab465/6279075>

There are approximately 5 liters of blood in a human body, which when multiplied by 68 pg, give you a estimated average mass of 340,000 pg, or **.34 micrograms** of spike protein.

r/conspiracy

If you were *this wrong* about this particular aspect of covid vaccines, I can only imagine how much you've misinterpreted everything else. Your life will be much less full of fear if you try educating yourself instead of listening to hucksters.

↑ 28 ↓ Reply Give Award Share Report Save
devils_advocaat · 8d

brave_00 · 8d 2

Even if I concede everything you just said to save myself time, using your math of:

Meaning covid vaccines produce ~3x to ~300x less amounts of viral proteins than covid infections do.

2 vaccine injections with 1 booster (where we are at right now) might very well begin to surpass your lower estimates.

T-cell immunity is generally for life so why would I want 50 lifelong boosters instead of 1 mild illness 1 time in addition to less spike proteins and no side effects from vaccines?

1. The cells in the upper respiratory that Covid-19 impacts have a short life-span. Which is why you get sick for a short amount of time if at all in most cases.
2. The cells affected by the vaccine are vast and in some cases have a lifespan of many years. This is due to the lipid part of the vaccine preventing the deltoid from holding it all to be filtered through the closest lymph-node system.

Why would you want to have cells that will host the spike protein in your body for potentially years when you could be done with covid in days/weeks in 99% of cases under 70 years old?

Please note this is my interpretation of data, and not in any way meant to sway opinions in either direction. I am in no way an expert in virology or biological sciences.

↑ 6 ↓ Reply Give Award Share Report Save

Xezron2000 · 8d

This is wrong. Your body recognizes the „cells affected by the vaccine“ as infected cells and destroys them like it would with any infected cells.

It's almost the same as covid, just that covid replicates and the vaccine doesn't. As he already said, covid has the same spike proteins as the vaccine. If it hadn't, the vaccine wouldn't work. So yeah, dangerous spike proteins is an argument FOR the vaccine.

r/conspiracy

But 1-2 million of lipid nanoparticles are found in the brain. Do you want your brain cells to be killed by immune system? You'll get brain trauma and that is likely to cause depression. Do you want your heart muscle cells to be killed by immune action? They don't grow back ever. Your heart will get weaker with each shot. Do you want your other critical and sensitive cells to be affected completely at random?

Malamutewhisperer · 8d

Every link I click, I find a gross misrepresentation of what you write.

"Japanese article on how the Pfizer vax is associated with brain hemorrhaging (lending credence to the hypothesis that the spike proteins are crossing the blood brain barrier in some people):

<https://joppp.biomedcentral.com/articles/10.1186/s40545-021-00326-7>

Article focuses on 10 deaths. Ten. And states very clearly:

"Although we understand that the benefits of tozinameran still outweigh the risks, we believe that a causal link with the vaccine is not proven but possible and warrants further analysis."

THEY BELIEVE THAT A CAUSAL LINK (a pretty low barrier) IS NOT PROVEN.

Yes, warrants further analysis. Which is why things like VAERs exist.

I'm literally scrolling and choosing at random and NOTHING is holding up to any scrutiny.

47 Reply Give Award Share Report Save

OderusOrungus · 8d

That's what science is, a flowing and finding of new open minded data. The science of you taking the jab is just as inconclusive. The CDC does not talk in absolutes either. We want this type of commentary, but take the shot while we figure it out?

In other words if u don't think this was an attempt to depopulation, u not paying attention. There is no mistake that the age for kids to start the vaccination is age 12. Conveniently the age most young girls start their period cycle or changes in their body. Let's get real here, even with fda approval I will still not get the jab. We have seen numerous times when fda have approved meds to months later have recalls or halted approval. The fact is that the spike in covid coincide with the mass vaccinations. Proof me wrong

↑ 2 ↓ Reply Give Award Share Report Save

KraviAvi · 5h

As a healthy male, under thirty, I likely have a greater chance of myocarditis than a COVID death and/or hospitalization, according to qcovid.

If you doubt it, the CDC just said that 16&17 year old boys have a 1 in 5000 chance of getting myocarditis post Pfizer. It's been readily observed in men 16-30.

Meanwhile the Japanese study, which references Kearney et al. says that the immune response of every person who had the Pfizer jab is significantly lower than before the jab for the first 6-8 days. And the lifetime of the immune response is lower than natural immunity.

Heck, Pfizer even says that 1.5 to 1 (about 250 out of 400) got COVID after the first jab in the first trial.

Statistically it's ultra unlikely for me to get COVID as is, why would I take a vaccine that permanently damages my immune response to COVID and is more likely to give me a bad reaction than I am to get the virus in the first place.

How about this one:

"A double-blind, randomized placebo-controlled trial shows that Ivermectin is able to cure covid within 6 days for most people: <https://www.medrxiv.org/content/10.1101/2021.05.31.21258081v1>"

Top comment from that site:

"There are some excellent comments below that I will not rehash, but I agree that this pre-print "as is" would not survive peer review without some serious revisions. Unfortunately, as this site is Open Source, this "study" is appearing in a lot of anti-vaxx rants on social media (it's been cited twice to me on Twitter so far today). It would be a great help if there were some printed caveats on sites like this (especially around topics where pseudoscience to outright quackery is rife) to dissuade people from taking VERY provisional results (from a flawed study with a modest number of participants) as "settled" science "proving the effectiveness" of Ivermectin."

89 people were in the study, also no consideration was given to the fact that covid already hits people differently. So while 34 ivermectin patients recovered quickly compared to 21 placebo, those "results" are far from proving anything.

16 up 1 down Reply Give Award Share Report Save

Casual_Joe · 8d

Ok but the vaccine is far from proving anything. Any long term peer reviewed studies? FDA will approve simply on social pressure bc "we have to do something" mentality.

Spot checking some of these links and you seemingly misrepresent a lot, probably banking on the fact people only read headlines.

Here's one striking example, you write:

r/conspiracy

/journal.pbio.1002198"

"Explains how", but the article itself goes to great lengths explain this is all HYPOTHETICAL and based on a single study using chickens and a single virus. You bring mention of Pfizer and moderna to elicit an emotional response even though this study predates either and obviously makes no connection. Shame on you.

I absolutely despise people that do this, they are the scourge of the earth

31 Reply Give Award Share Report Save

SimplyGrowTogether · 8d

This idea follows from the notion that natural selection removes pathogen strains that are so "hot" that they kill their hosts and, therefore, themselves. Vaccines that let the hosts survive but do not prevent the spread of the pathogen relax this selection, allowing the evolution of hotter pathogens to occur. This type of vaccine is often called a leaky vaccine.

Is this not a reasonable connection to make with covid vaccines?

16 Reply Give Award Share Report Save

onmyway4k · 8d

Every breakthrough infection is already proof of that. We have ample evidence not only of breakthrough but cross infection of Vaccinated people. Each of these cross infection between the Vaccinated is a Petri dish for evolutionary pressure. That is exactly how you create resistant strains of everything, Viruses or Bacteria. Evolution 101

26 Reply Give Award Share Report Save

4 more replies

sunst0ne · 8d

How did he misrepresent? The article DOES explain how.

"keeping hosts alive with vaccines that reduce disease but do not prevent infection, replication, and transmission" — sounds like Moderna and Pfizer.

Also your "scourge of the earth" rhetoric is cringe as fuck.

I love Reddit so much. Thank you for answering so many questions in detail that I had.

Side note: I'm still scrolling through the comments, but is ADE an issue also for people whose bodies fight it naturally or not as much because bodies build up more than just an antibody defense naturally (like T cells and all the other goodness)?

↑ 2 ↓ Reply Give Award Share Report Save

transcis · 8d

Natural immunity usually features antibodies to 3 viral proteins plus an antibody to viral RNA. So ADE from natural immunity is very unlikely. The vaccines were extensively tested to eliminate the possibility of ADE but only against the original strain which was dominant at the time of the trial. Whether or not Delta variant will trigger ADE is not known.

↑ 2 ↓ Reply Give Award Share Report Save

I just read his open letter to the WHO.

He's not against mass vaccination at all. He just doesn't think *this kind* of vaccination is the correct course.

"Paradoxically, the only interventon that could ofer a perspective to end this pandemic (other than to let it run its disastrous course) is ...VACCINATION. Of course, the type of vaccines to be used

r/conspiracy

cells play a key role in faciilitatng complete eliminaton of Covid-19 at an early stage or infecton in asymptomaticlly infected subjects. NK cells are part of the cellular arm of our innate immune system and, alike natural Abs, they are capable of recognizing and atacking a broad and diversifed spectrum of pathogenic agents. There is a sound scientfc ratonale to assume that it is possible to 'prime' NK cells in ways for them to recognize and kill Coronaviruses at large (include all their variants) at an early stage of infecton. NK cells have increasingly been described to be endowed with the capacity to acquire immunological memory. By educatng these cells in ways that enable them to durably recognize and target Coronavirus-infected cells, our immune system could be perfectly armed for a targeted atack to the universe of Coronaviruses prior to exposure. As NK cell-based immune defense provides sterilizing immunity and allows for broad- spectrum and fast protecton, it is reasonable to assume that harnessing our innate immune cells is going to be the only type of human interventon lef to halt the dangerous spread of highly infectious Covid-19 variants."

Typos aren't his, I don't know why copying did that.

So right there, I have an issue with antivax championing him. He even has a disclaimer on his website stating that people from both sides are using his words and that's not what he wants, he believes what he says.

But, there are a lot of holes in his reasoning. He starts off comparing viral immunity to vaccines with immunity to antibiotics, which can happen. He says basically our immune system creates natural antibiotics, abd just moves on but that's flawed. It's not exactly the same, and the results don't compare. Additionally, it excludes the ability to modify a vaccine for a virus, as we see with yearly flu shots.

Overall my takeaway is he is more interested in this NK based vaccine research, I won't speculate why, but I'm already seeing flaws in his reasoning against the covid vaccination as I scrape across the top. He reminds me of Manhattan project physicists who genuinely believed the first atomic test would ignite the atmosphere and destroy all life on earth. His concerns are based in fact, but they are exaggerated out the the farthest extreme.

"appears to be"

"the potential"

so because something might maybe possibly be true/happen, no one should get the vaccine.

it appears if you get covid you could die and/or have long term helath problems. without the vaccine you have the potential to die from covid.

commerciary ceanar Get back to me when they decide to treat people who are covid recovered with the same social status as people who are vaccinated. Get back to me when the CEO of Pfizer decides to get the shot. Get back to me when social media accounts aren't censoring dissenting views from doctors with the same degrees as the 'experts' who are sanctified by the administrative state. Get back to me when US citizens become Americans again.
